

MIURA SECURE PAYMENT APPLICATION

POS INTEGRATION WITH PAYMENTS MADE SIMPLE

Implementing payment solutions can be complex, with disparate platforms, EMV kernels, changing security requirements, and annual PCI compliance.

The Miura Secure Payment Application (SPA) removes these obstacles, allowing you to quickly and easily interface your software with a modern, robust, and certified payment solution.

With SPA, smart semi-integrated connectivity combined with point-to-point encryption (P2PE) isolates the POS application from secure payment data. This eliminates the need to obtain PA-DSS certification for your POS app, and reduces the time, labor, and costs associated with PCI compliance.

Designed to fit your business needs

SPA is built to scale across all Miura devices, business segments and use cases including countertop or mobile.

One turnkey solution allows you to enable payments everywhere – inside, outside, curbside, and at self-service kiosks.

SPA supports businesses who want to provide a contact-free payment experience for customers and minimize physical interaction by disabling features like signature capture and receipt printing.

It also facilitates remote management using the Miura Device Management System (DMS) the smart, secure and scalable way to deploy, organize, manage, and monitor devices across your enterprise.

One powerful app made your way

Our API is so simple to use that you can be quickly up and running with a fully-certified payment solution. Tap into the knowledge of our experts to determine the devices, configurations and feature sets that best fit your business model; the industries you serve; and your customers' specific needs.

Run SPA as a semi-integrated solution, or standalone
